

Aakrit Sharma

aktionknight@gmail.com

PROFESSIONAL SUMMARY

Highly motivated junior developer with hands-on experience in Python, SQL, GenAI (LLMs, RAG), and React JS for building scalable web applications and digital products. Proven ability to rapidly prototype and develop Minimum Viable Products (MVPs) within Agile frameworks. Adept at full-stack development, logic building, and integrating emerging technologies to streamline workflows and achieve data-driven insights. Eager to apply and expand expertise in cloud-aware application development and product innovation.

EXPERIENCE

Neuronic

2025 - 2025

Software Development Intern

- Partnered directly with stakeholders across the end-to-end software product development lifecycle, interpreting business requirements and translating them into an effective MVP product solution.
- Designed and developed the company's MVP web platform in Next.js, applying modern software engineering principles to deliver a scalable and maintainable front-end architecture within a fast-paced, agile environment.
- Assisted in building an AI-powered document ingestion pipeline, streamlining manual document-review workflows while evaluating emerging technologies (LLMs, RAG); communicated technical decisions clearly to internal teams under tight timelines.

The Bbarn

Oct 2025 - Oct 2025

Co-Founder + Technical Lead

- Led end-to-end development of a production website using Astro.js and JavaScript, applying modern software engineering principles to build a scalable, maintainable, cross-platform product.
- Engineered clean, efficient, and reusable front-end components and optimized asset delivery, improving performance and page responsiveness across desktop and mobile.
- Integrated emerging technologies, including Three.js for interactive 3D experiences, balancing innovation with cross-device compatibility and system reliability.

PROJECTS

SeeVee - AI-Powered Cold Outreach Automation Platform *FastAPI, PostgreSQL, React, Gemini 2.5, RAG, Multi-Agent Systems*

- Built an end-to-end SaaS platform (FastAPI, PostgreSQL, React) to streamline and automate sophisticated cold-outreach workflows, eliminating repetitive manual prospecting tasks.
- Architected a distributed multi-agent pipeline powered by Gemini 2.5, interpreting business requirements for lead enrichment, company research, and personalized outreach, reducing manual effort by over 80%.
- Integrated Retrieval-Augmented Generation (RAG) and MCP tool-calling for real-time intelligence gathering, demonstrating continuous evaluation of AI/software engineering trends.

PDF Intelligence System (Adobe India Hackathon)

FastAPI, Python, REST APIs, Document Intelligence

- Designed and implemented scalable, maintainable RESTful services in FastAPI for large-scale document parsing and analysis workflows.
- Built a ranking pipeline prioritizing the most relevant document sections while writing clean, efficient code under a strict 5-minute execution constraint.
- Integrated LLM-powered document understanding modules while maintaining low-latency, high-performance API responses.
- Rapidly prototyped and optimized the pipeline under competitive deadline pressure, reducing end-to-end inference time by over 30%.

GigDAG Blockchain Platform

Solidity, Web3, Distributed Systems, Full Stack Development

- Built a decentralized, distributed freelance marketplace with smart-contract based escrow, applying secure, mission-critical system design principles to on-chain payment settlement.
- Developed backend and frontend services integrating MetaMask authentication, ensuring reliable and secure transaction execution.

- Designed secure contract interactions and optimized workflows across the distributed architecture, reducing execution latency by 25%.

SKILLS

Technologies	Python, GenAI (LLMs, RAG, Gemini 2.5), React JS (Next.js, Astro.js), SQL (PostgreSQL), FastAPI, Product Development, MVP Development, Prototyping, Web Application Development, Application Development, Agile Methodology, Logic Building, REST APIs, Full-Stack Development, Distributed Systems, JavaScript
--------------	--

ACHIEVEMENTS

LeetCode
Solved 350+ algorithmic problems spanning graphs, dynamic programming, trees, greedy algorithms, and advanced data structures. Strong foundation in complexity analysis, debugging, and writing efficient C++ solutions to intricate technical problems.

Toastmasters International & Case Competitions
Member honing public-speaking and communication skills; competed in business case competitions (Axis Bank, Bain & Company), resolving intricate business problems under high-intensity, time-constrained settings.
