

PROFESSIONAL SUMMARY

Highly motivated and results-driven Junior Developer with hands-on experience in full-stack development, specializing in GenAI-powered applications and web platforms. Proficient in Python, React, and SQL, with a proven track record of rapidly prototyping, developing, and optimizing digital products and web applications within agile environments. Eager to apply and expand expertise in product development, data analytics, and cloud infrastructure to build innovative solutions.

EXPERIENCE

Neuronic	2025
Software Development Intern	
- Partnered directly with stakeholders across the end-to-end software product development lifecycle, interpreting business requirements and translating them into an effective MVP product solution. - Designed and developed the company’s MVP web platform in Next.js, applying modern software engineering principles to deliver a scalable and maintainable front-end architecture within a fast-paced, agile environment. - Assisted in building an AI-powered document ingestion pipeline, streamlining and automating a manual document-review workflow while evaluating emerging technologies (LLMs, RAG); communicated technical decisions clearly to internal teams under tight, fast-paced timelines.	
The Bbarn	Oct 2025
Co-Founder + Technical Lead	
- Led end-to-end development of a production website using Astro.js and JavaScript, applying modern software engineering principles to build a scalable, maintainable, cross-platform product. - Engineered clean, efficient, and reusable front-end components and optimized asset delivery, improving performance and page responsiveness across desktop and mobile. - Integrated emerging technologies, including Three.js for interactive 3D experiences, balancing innovation with cross-device compatibility and system reliability.	

PROJECTS

SeeVee - AI-Powered Cold Outreach Automation Platform	FastAPI, PostgreSQL, React, Gemini 2.5, RAG, Multi-Agent Systems
- Built an end-to-end SaaS platform (FastAPI, PostgreSQL, React) that streamlines and automates a sophisticated cold-outreach business workflow, eliminating repetitive manual prospecting tasks. - Architected a distributed multi-agent pipeline powered by Gemini 2.5 that interprets business requirements for lead enrichment, company research, and personalized outreach, reducing manual effort by over 80%. - Integrated Retrieval-Augmented Generation (RAG) and MCP tool-calling for real-time intelligence gathering, reflecting continuous evaluation of emerging trends in AI/software engineering.	
PDF Intelligence System (Adobe India Hackathon)	FastAPI, Python, REST APIs, Document Intelligence, LLMs
- Designed and implemented scalable, maintainable RESTful services in FastAPI for large-scale document parsing and analysis workflows. - Built a ranking pipeline prioritizing the most relevant document sections while writing clean, efficient code under a strict 5-minute execution constraint. - Integrated LLM-powered document understanding modules while maintaining low-latency, high-performance API responses. - Rapidly prototyped and optimized the pipeline under competitive deadline pressure, reducing end-to-end inference time by over 30%.	

SKILLS

Technologies	Python, GenAI (LLMs, RAG, Gemini 2.5), React JS, SQL (PostgreSQL), Cloud Infrastructure, FastAPI, Next.js, Astro.js, JavaScript, Full Stack Development, API Development (REST), Product Development, MVP Development, Prototyping, Data Analytics, Agile Methodologies, Distributed Systems
--------------	--

ACHIEVEMENTS

LeetCode

Solved 350+ algorithmic problems spanning graphs, dynamic programming, trees, greedy algorithms, and advanced data structures. Strong foundation in complexity analysis, debugging, and writing efficient C++ solutions to intricate technical problems.

Toastmasters International & Case Competitions

Member honing public-speaking and communication skills; competed in business case competitions (Axis Bank, Bain & Company), resolving intricate business problems under high-intensity, time-constrained settings.
